

7.3 LESSON NOTES

EXTRACT DATA

- Allows you to create a subset of your existing data and cache it into Google cloud storage
- Very useful when you have large volumes of data and your reports are loading slowly
- Extract Data is a data connector that you can select when you create a new data source
- After adding the fields and filters for the data you want to cache you can choose an Auto-Update interval which will take a new snapshot of your data and replace the old one
- Benefits of Extract Data:
 - More secure
 - Access to row-level data
