

7.2 LESSON NOTES

DATA EXPLORER

- Helps you in the data discovery phase of your project
- You can build queries and charts outside of reports
- You can add more than one chart or table to the Exploration which allows you to use the Apply filter functionality (activated by default) on each chart/table
- Filters are added and constructed directly in the same interface as the chart you're working on. And can be saved to a data source if the Exploration is saved to a report
- Explorer can be accessed from any report by right-clicking or clicking the 3 dots on any chart

EXPLORER ADDITIONAL INFO

- Explorations are temporary unless you **save** them
- Explorations are **private** and cannot (currently) be shared
- Explorations charts are **copies**. There is no link between charts in explorations and reports.
