

# 5.4 LESSON NOTES

---

## RUNNING CALCULATIONS

- Mainly used in time series or area charts but can be used for other types as well
- Available running calculations:
  - **Running sum** - adds as previous values to the current one
  - **Running min** - displays the current minimum value in the series
  - **Running max** - displays the current maximum value in the series
  - **Running count** - displays the count of the number of values in the series so far
  - **Running average** - displays the result of the running sum / running count
  - **Running delta** - displays difference between current and previous value in the series
