

6.7 LESSON NOTES

PARAMETERS

PARAMETERS

- Added 20 August 2020
- Used in calculated fields
- Number, Text or Boolean variable values
- Can be used in “What if?” scenarios
 - *“How much would our shipping costs increase if the price of gas went up 20%?”*

3 Steps to creating parameter example:

1. Create numeric parameter and set values
2. Create calculated field that uses parameter in formula to impact other metrics e.g.
SUM(Shipping cost)*Variable1
3. Add a control to the report that contains the parameter added from the schema on the right
