

# 9.4 LESSON NOTES

---

## BLENDING DATA IN DATA STUDIO

- The data source you start the blend with will always be added to the left side of the join
- Can select multiple joining keys (common fields between data sources) if necessary
- Then choose fields you want to include from both side

### LIMITS OF BLENDED DATA

- Blended data sources belong to report where created. They do not appear in Data Source assets.
- Copy and paste component into another report to reuse the same blended data
- Can blend up to 5 data sources in one chart
- Can blend the same data source with itself to get around some limitations of certain data source types, e.g. Google Analytics
